

ASSET

(05/2019 – 04/2021)

Target: The development of a holistic and tiered solution for research, Innovation and Training in the energy transition.

OTEAcademy participates in the ASSET innovative/educational European program, which targets the creation of a hub related to the energy transition, which will bring in contact educational bodies, industries, enterprises and apprenticeship researchers and professionals.

Asset will create a digital platform which will allow communication and the exchange of information and services. Especially, for the educational bodies, Asset will provide a holistic online tool, based on the already existing structure of the research project MATHISIS, which will support the quick creation of training programs and the easy access to material and data. Therefore, it will be a platform which will support all forms of teaching in any topic that deals with energy transition.

OTEAcademy will provide standard training services and tools within the framework of developing the project's training method.

The project is funded by the European Union through the program Horizon 2020, the duration is 2 years (5/2019-4/2021) and eleven (11) corporate entities participate from five (5) countries (Greece, Spain, Denmark, Italy, Germany).
